The Digilin Difference

There are a large number of LED products on the Australian lighting landscape, many of which are of inferior quality. Some companies importing these products make completely unsubstantiated claims of performance and life span

What makes Digilin different?

There are several key differences between our company and our competitors. Digilin Australia is the oldest manufacturer of Fibre Optic and LED products in Australia (since 1980) and one of only a very small number of companies producing here

Let us look at some of our distinguishing features:

- Digilin is Australian owned and staffed by qualified electronic engineers. Few companies in Australia understand LED lighting like us. Most of our product range is manufactured in Bulimba (suburb of Brisbane) Queensland
- We only use premium LED's from the worlds leading manufacturers (Cree, Nichia, Luxeon for example)
- Digilin understands heat dissipation requirements better than anybody. Our technology is second to none and far superior to most, ensuring our luminaires and strips meet or exceed LED manufacturers lifespan expectancy
- Our lens design and technology is unsurpassed throughout the world resulting in superior optics and efficiencies
- We bring advances in LED technology to market faster than our competitors, without ever compromising our rigorous pre-release testing
- Digilin has no commercial allegiances with any single LED producer meaning that we can source the best LEDs from wherever they may be. This is particularly important due to the 'leapfrogging' nature of advancements between the major LED makers
- Our strict binning controls ensure correct colour matching. Fittings that we supply contain detailed bin information for future colour and performance matching should it ever be required. We even cross reference the makers part number for future reference
- Digilin boasts the oldest fully functional LED lighting installation in Australia (Mall Music, Brookvale) and our company's reputation and record of reliability is unparalleled in this country

CASE STUDY

'SEED FEMME' Retail Fashion Outlets

In November 2009 Digilin was contacted (along with several leading LED suppliers) to supply samples for the upcoming 'Seed Femme' up-market retail stores; subsequently several samples were sent to BrandBank for appraisal.

The Digilin product differed from all others submitted in three key areas: One, our 'light delivery' was superior to all other tendered products; Second, our 'performance per watt' was the best on offer and third; our product was the only Australian made offering.

In February of 2010, James Aktins ('BrandBank' Senior Project Manager responsible for Seed fitouts) contacted Digilin and made the following statements... 'Your Icons are what we want, nothing comes close to their performance that we can find...' 'They are fantastic.' High praise indeed!

James had requested one alteration to the warm white version submitted, a LED with the color temperature of 3500 degrees with high color rendering index, so important for retail fitouts. These LED's were quickly sourced from Nichia (Japan) and Digilin undertook the production process in our factory (located Bulimba, Queensland).

Digilin also supplied many metres of Neutral White 'UltraFlex' LED strip to Seed Femme in matching color temperature for all in store shelf lighting.

At the time of writing, four Seed fitouts had been undertaken, Mosman, the Queen Victoria Building (NSW) and Melbourne Central, (the Seed flagship store in Victoria) with at least 6 more outlets scheduled.

Nett Benefits to 'Seed Femme'

- Hugely reduced electricity cost over halogen
- Exceptionally long lifespan
- Zero maintenance
- Tightly controlled color rendition

CASE STUDY

SUPERYACHTS

History

Digilin has manufactured and supplied LED and Fibre Optic solutions for some of the world's most exclusive and luxurious yachts over the years. Recently we have completed work on yachts such as 'MY Smerelda' (the fastest super yacht in the world), 'MY Silver Zwei' built by the world re-nown Australian ship builder 'Hanseatic Marine' and the 'Necker Belle' (Sir Richard Branson's yacht), all in conjunction with Queensland design specialist 'Creative Lighting Concepts'.

Simon MacKay, (MD of C.L.C) chose Digilin for several reasons: Superior performance, reliability, overall hi quality and Digilin's track record in providing custom solutions to tricky design challenges.

All of these yachts, feature extensive use of MicroPower Led strips, whilst the Necker Belle also uses RGB Taipans and drivers/controllers. Fibre Optic lighting also appears along the hull of the MY Smerelda.

CLC and Digilin's most recent challenge was to create a special bollard for the MY Silver Zwei; a bollard that needed to illuminate evenly and show no 'spotting' or 'striping'. Furthermore, the light could not vary in intensity through the diffuser at any point on its shape. Whilst seemingly not a huge challenge in itself, the task was made difficult given the irregular mounting surfaces enclosed behind the opal envelope. Whilst a bespoke internal mounting skeleton would solve the problem, the shadows cast by such a structure proved very difficult to eradicate.

The disclose the final solution here would give away our 'trade secret' suffice to say a successful outcome was achieved and the bollards duly constructed and installed

At the time of writing Digilin is developing a new range of 'marine specific' products for CLC to increase its penetration into the luxury yacht segment

v1.2

CASE STUDY

GPAC – Geelong Performing Arts Centre

After 30 years of entertaining the locals, The Ford Theatre at the Geelong Performing Arts Centre (GPAC) recently underwent an extensive makeover re-opening as The Playhouse.

Integral to this rejuvenation has been the inclusion of the state-of-the-art LED light design, towards which Digilin has supplied over 170 ICON LED downlight fittings.

Mark Trubridge, from Electrolight – (a specialised Lighting Design Consultancy) – was contracted for the architectural lighting design of the auditorium.

Mark approached Joe Casamento of Lightmoves to develop an appropriate LED solution. A decision was made to use Australian-made Digilin ICON downlights, contained in a custom housing. The ICON's incredible output, lamp life, and low power usage made them the most suitable choice. 'With somewhere close to 250 fittings, technical staff were changing several halogen globes a week. The ICON's should have a 15-30 year lamp life, which reduces the need for maintenance completely' says Mark. Furthermore; there were two unsightly winches which had to stay permanently in the auditorium purely for the purpose of changing the globes in the halogens, but now they have been removed.

In addition to the ICON fittings, Lightmoves also supplied LED light strips to highlight the wood panelling and for use as step lighting.

The theatre staff, architects and Arts Victoria are all very happy with the result, but Mark was particularly thrilled with the result 'We think it is the first auditorium of that size in Australia to be fully house lit with LED's, and I'm very pleased that it has all worked so well.'

Nett Benefits to 'GPAC'

- Hugely reduced electricity cost over halogen
- Exceptionally long lifespan
- Zero maintenance

CASE STUDY

JUNCTION HOTEL - all LED installation

The Junction Hotel, Newcastle NSW represents a milestone in lighting technology, being entirely illuminated by LED's.

EJE Architects commissioned local contracting firm 'The Hot Spot Group' to design and construct an all electronic lighting system, an undertaking not before attempted in this country. Digilin was commissioned to supply all over-head lighting in public areas including the toilets, bars and dining areas with our highly popular 'Taipan' 3 watt Luminaires. The exterior of the building is also fitted with Digilin Taipans.

Digilin color changing Taipans have been used in the water feature, and our LED brackets adorn many of the walls.

Since the Junction Hotel was completed, Digilin has increased its range of LED Luminaires with more powerful models as yet unparalleled by any other manufacturer.

CASE STUDY

The Offices of DLA Phillips Fox

History

When Digilin released a second generation ICON LED downlight, Lighting Consultants 'Northrop' were amongst those companies quick to adopt the product for several projects. One of these was the prestigious fit out for the legal firm 'DLA Phillips Fox'.

Used in this instance for crating strong pools of tightly controlled light, the Icon luminaires provide a dramatic effect that can be seen in these photographs. (Wide beam versions are also available).

This fit out subsequently won a prestigious 'IES' award for excellence in lighting. Congratulations Northrop Consulting Engineers for your excellent design work.

Available in wide, medium and narrow beam
(Narrow used in this project)

Nett Benefits

- Hugely reduced electricity cost over halogen
- Exceptionally long lifespan
- Zero maintenance
- Tightly controlled color temperature

CASE STUDY

SONY - Playstation Stand

Sony Account Manager Elissa Harwood approached Digilin in late June 2010 in order to provide a cost effective, yet dynamic lighting solution for the new Playstation PS3 display stand, oh, and it was urgent as the stand had to be constructed and on site in three weeks!

The lighting effect had to reflect the sophisticated nature of the PS3 gaming console, so a custom LED light show program was devised by Sony's in house designers, then refined and programmed by Digilin's own Electronics Engineer, Craig Clark.

The lighting was manufactured, programmed and sent as a simple 'plug and play' solution for installation by the stands designers and builders, 'Displaywise' after some on site tuition by Digilin it was commissioned and up & running!

The end result? A quote from Elissa tells the story pretty well "they (Sony Computer Entertainment management and the client) were wrapped with it and it won Best Stand of the Expo! Thank you so much for your help, we really appreciate everything you did for us".

v1.6

CASE STUDY

MUSIC MALL - Brookvale NSW

Is this the oldest, functioning LED lighting installation in Australia?

Probably Sydney's oldest LED Lighting installation of it's type, and Digilin's first

Looking good despite 8 years of abuse!

Back in 1999, leading Sydney Lighting Designer Barry Webb (Now retired) contacted Digilin to see if a maintenance free luminaire could be manufactured to be used in a proposed record store at Brookvale on Sydney's Upper North Shore. It had to be 'low heat' as it would sustain high pedestrian traffic, but could not be fibre optic as the bend radius of the fibre precluded its use.

Additionally, the luminaire needed to be very compact, robust and resist water ingress, oh, and most importantly, be maintenance free!

Sounds simple...?

One must remember that in 1999 there was only one other Manufacturer of LED Architectural lighting of note in Australia (Which has long since gone out of business) and such luminaires were anything but commonplace. Large overseas companies were still scratching their heads over LED's, with most predicting that they were only a fad.

Digilin accepted the challenge, and the result is seen here.

These photographs were taken January 14, 2008, some 8 years after installation, and all lights are still functional; none have ever been replaced or serviced. While it may seem a miracle that a LED product from that era could survive, it is in fact a testament to the design and build quality of the Digilin product.

At that time, without any prompting, the owners of the 'Music Mall' Geoffrey and Amanda Bonouvrie made the following comments:

"We have lots of different lighting in this shop, and these are the only ones that have never given us any trouble"... "... if only all the other lighting was LED"

Well guess what? Now it can be. Digilin now produces a range of overhead LED lighting powerful enough for retail lighting levels

LED technology has long since surpassed the performance of the '5 mm' LEDs shown here, but Digilin's skill in producing high output, ultra durable LED lighting still reigns superior.

Please contact us for more information.

CASE STUDY

Energy Australia Smart Home

The Energy Australia 'Smart Home' once housed athletes competing in the 2008 Sydney Olympics. It has now been renovated by Energy Australia to show-case the latest in energy saving, and environmentally sound technology.

From Energy Australia's web site we quote the following "Light emitting diodes have long been considered the most efficient form of lighting, but the expense and quality of LED lights have been a problem. Until Now! The Smart Home will be trailing new lighting technologies that combine LED lights where practical and energy efficient fluorescent lights where practical and energy efficient fluorescent lights. The house has 645 watts of LED and fluorescent lighting - if it was lit by a conventional low voltage downlight it would have over times this wattage!/"

The Australian made Digilin Icon was selected for the Smart Home by independent consulting firm 'Lighting Art + Science' and now feature in the living areas.

Digilin is proud to be associated with the Smart Home initiative.

CASE STUDY

ROBERTSON RESIDENCE, MUDGEES
LIT ENTIRELY WITH LED

History

Richard Mann (BHI Architects, Sydney) approached Digilin (after recommendation by Northrop Lighting Designers) looking for products suitable to illuminate a new residence under design for the Robertson family, owners of Thistle Hill Winery in Mudgee, NSW.

Upon inspection of Digilin's range Richard commented that "These are the best fittings I have seen; highly impressive..."

Icon downlights, Tera in ground fittings, Taipan's (both recessed and surface mounted) and 'Section J' downlights were incorporated throughout the building. For the kitchen Richard wanted a linear solution suitable for the high ceiling, so the 'Linear Modular' unit was born.

The end result is a well and comfortably lit home with the capability of high light outputs normally associated with fluorescent and halogen lighting. Leslie Robertson contacted Digilin on several occasions since expressing her satisfaction with, and praise of the lighting products selected.

MARINER OUTDOOR OPTION

For LED Boards

THE MARINER OUTDOOR OPTION FOR ALL DIGILIN LED STRIPS COMPRISES OF THE JAVELIN EXTRUSION AND THE SEALING OF THE ELECTRONIC BOARD IN A CLEAR, UV STABLE, NON HARDENING MATERIAL

Conventionally sealed strips rely on Resin or Silicates to encase the LED board; neither having a reliable long lasting effect, as Silicates break down, discolour and leach moisture.

Resin will separate from the surfaces it is in contact with after it has heated and cooled several times, (being an inflexible material), thus allowing moisture to eventually come between those surfaces. Additionally, most resins do not offer UV stability

Project Mariner with Clear, soft, UV stable polyurethane sealant

WHY IS THE DIGILIN MARINER OPTION SUPERIOR?

Digilin uses a non hardening, patented polyurethane that provides a flexible 'bath' in which the board may operate without any breaking down of the seal between any of the surfaces. This material has the ability to be crushed, or dented, and will return to its original, un-deformed shape

Most Digilin board variants may be used with Mariner option

HOW TO SPECIFY/ORDER?

Once you have decided what LED board to use, simply suffix with JAV/MAR

This indicates the addition of Javelin heatsink extrusion and the Mariner clear bath
For example, If the Micro Power Led is chosen (as illustrated):

'Digilin MicroPower LED/Jav/Mar (and the run length)' If a diffuser or lens is required, please see the Javelin data sheet

v3.2

JAVELIN EXTRUSION FAMILY

For LED Strips

THE JAVELIN RANGE OF EXTRUSION AND DIFFUSER/ LENS COMBINATIONS OFFER UNRIVALLED CHOICES TO THE LIGHTING DESIGNER:

Choose from Linear Optic Convex lenses in 30, 60 or 90 degree spreads; Opal, Semi Opal or clear diffusers

No other LED manufacturer offers combination of strip and lens options that Digilin provides

JAVELIN END VIEW

TYPICAL DIFFUSER DIMENSIONS

JAVELIN MOUNTING CLIP

SPECIFICATIONS

Base - Extruded Aluminium finned heat sink

Mounting Clip - moulded acrylic

Diffuser - Moulded Acrylic

IP Rating - IP44

Lengths - any length up to two metres then butt join

Optic lenses and Diffuser choices

Clear or Frost 30 degree (part number Javelin C30 or F30)

Clear or Frost 60 degree (part number Javelin C60 or F60)

Clear or Frost 90 degree (part number Javelin C90 or F90)

Opal Diffused (part number Javelin O)

Frosted Diffused (part number Javelin F)

Clear (part number Javelin C)

Additional information

The Javelin extrusion acts as a heat sink for the Digilin MicroPower, TriPower and PowerLed products; no further heat management is required

Javelin is designed for indoor, or under cover use and may be optioned up for outdoor use

CUSTOM LED STRIPS

We manufacture to your design

Digilin can manufacture custom circuit boards (minimum of 50 to 100 metres depending on type) or complete fittings, assuming that the size of the project warrants it

If you are unable to find an LED circuit board or luminaire to suit your application, please contact your Digilin representative to enquire further

DIGILIN has the unique ability to assist you to design your own LED circuit board or complete fittings and subsequently manufacture in Australia

The DIGILIN engineers have a successful track record in this area, having been contracted by a number of high profile Australian lighting companies who look to us to help them devise new products, and win projects or government contracts

v3.2

DIGILIN POWER-CONTROL-DIMMING

LED Light Sources and Strips

As we all know, powering, control and dimming LED light sources and strips can be confusing. This document is not aimed at the technophile (that info is available separately from our web site), but to give us a bit more product knowledge/confidence regarding the Digilin LED range, when dealing with potential clients and specifiers. Technical information is also available from our web site.

Digilin products are mostly dimmable, but in varying ways. Easy to read cross reference tables are provided with each product showing what equipment is required for Power/Control/Dimming and 'Stand Alone' systems. These cross reference tables include:

- Constant Current LED Fitting/Driver Cross Reference'
- Digilin LED Strip Range Quick Reference'
- LED Strip/Power Supply Driver Cross Reference'

Please note nearly all of our products can be dimmed via control systems such as Dynalite, C-Bus, DALI etc. In these instances additional 'bridging' modules or drivers may be required. Refer to the 'Type of Dimming system' column in this instance when discussing with the specifier or contractor, alternatively contact us for more information. We have a separate, more comprehensive document covering DALI.

This page gives a thumbnail of the various types of equipment discussed within. We trust this will make life easier for our customers

'LDP' wall controller/dimming driver/remote control

'LDR' repeater/driver and 'LDALI-PWM-3' dimming/driver

'LAC' analogue dimming controller (0-10v)

'LDMX-PWM-3' dimming and RGB driver
