DUS30LHB-DALI

Multifunction Sensor

Long-range high bay DALI network sensor

The Philips Dynalite DUS30LHB-DALI is a 30 degree multifunction sensor that combines motion detection (PIR) and ambient light level detection (PE) in one device. The sensor uses the DALI protocol for power and communications to a network control system, eliminating the need for additional network field wiring. This sensor is useful for long-range detection.

DUS30LHB-DALI

Long-range high bay DALI network sensor

- **MultiMaster compatible** – Fully compatible with a Philips Dynalite DALI MultiMaster controller, such as the DDBC120-DALI.

- **Motion detection feature** – Detects the presence or absence of motion and triggers a programmed action.

- **Ambient light level detection** – In applications where it is critical to maintain precise lighting levels, the PE function reads ambient levels and adjusts artificial light accordingly.

- **Daylight harvesting** – When used in conjunction with networked open loop daylight sensor.

- **Infrared receive capability** – Enables sign-in identification to the networked system.

- **Corridor hold** – Links corridor areas with adjacent rooms so corridor remains lit while occupancy is detected in adjacent rooms.

- **Targeted positioning** – Directional wallmounting block allows sensors to be easily mounted and directed to the required area.
