

DynamicTouch Customizable mobile app

Intuitive and effortless control

DynamicTouch provides intelligent system control, via an iOS hand-held device. Suited to both residential and commercial control applications, multiple integrated systems can be easily controlled with single preset scenarios such as 'Welcome Home' or 'After Hours'. It is fully customizable, providing the user with the ability to fine-tune both the system and the appearance of the interface itself.

- Fully customizable — The page layout and graphical design of this app can be customized by the installer to meet the exact requirements of the end-user. It is the ideal choice in applications such as boardrooms, where high levels of control are required for multiple systems through a single app.
- Effortless control — Users can view current system status and make adjustments to lighting, HVAC, blinds and other equipment connected to the Philips Dynalite control network.
- Control individual lighting channels — Adjust standard light sources via sliders, with an option to control warm-white / cool-white fixtures and RGB color settings.
- Single-click control — Recall predefined user preferences including lighting, blinds, heating and entertainment systems
- Available for Apple iOS 5.0+ devices only — iPhone, iPad, iPad Mini and iPod Touch.
- Simple Ethernet connection — Requires a Philips Dynalite EnvisionGateway and a WiFi router to connect to the Philips Dynalite system.
