

The SC-D MXrec is a simple show controller designed to playback DMX information for applications where a full lighting control console is not required. Record up to five hours of show time, or record snapshots of incoming DMX information from a lighting control console. Create scenes, chases and shows for playback as required and assign to one of eight memory slots.

A comprehensive choice of cue/chase/show triggering delivers full flexible solutions for installations where DMX luminaires need to be integrated into a building lighting control system.

Recorded data can be easily backed up via the SD card slot, or directly copied to a PC via USB cable. The SC-DMXrec can also be utilized as a simple back up show controller for applications requiring redundant control.

Features:

- Records and outputs one universe of DMX512
- 5 trigger modes : Internal timeclock, SMPTE, MIDI, DMX, and Manual
- 8 memories with individual settings for assigning Shows, Scenes or Chases
- Over five hours of storage for show time
- 4 recording modes
- Dry contacts available for each memory and playback controls
- Terminal connectors for input and output connections
- Colour LCD display for easy configuration
